

SORTING METHODS

QUICK SORT PARTITION VISUALISATION (CONSIDERING LAST ELEMENT AS THE PIVOT)

SORTING METHODS

PARTITION ILLUSTRATION

```
arr[] = {10, 80, 30, 90, 40, 50, 70}
Indexes: 0  1  2  3  4  5  6
```

```
low = 0, high = 6, pivot = arr[h] = 70
Initialize index of smaller element, i = -1
```

```
Traverse elements from j = low to high-1
```

```
j = 0 : Since arr[j] <= pivot, do i++ and swap(arr[i], arr[j])
i = 0
```

```
arr[] = {10, 80, 30, 90, 40, 50, 70} // No change as i and j
// are same
```

```
j = 1 : Since arr[j] > pivot, do nothing
// No change in i and arr[]
```

```
j = 2 : Since arr[j] <= pivot, do i++ and swap(arr[i], arr[j])
i = 1
```

```
arr[] = {10, 30, 80, 90, 40, 50, 70} // We swap 80 and 30
```

```
j = 3 : Since arr[j] > pivot, do nothing
// No change in i and arr[]
```

```
j = 4 : Since arr[j] <= pivot, do i++ and swap(arr[i], arr[j])
i = 2
```

```
arr[] = {10, 30, 40, 90, 80, 50, 70} // 80 and 40 Swapped
```

```
j = 5 : Since arr[j] <= pivot, do i++ and swap arr[i] with arr[j]
i = 3
```

```
arr[] = {10, 30, 40, 50, 80, 90, 70} // 90 and 50 Swapped
```

```
We come out of loop because j is now equal to high-1.
```

```
Finally we place pivot at correct position by swapping
arr[i+1] and arr[high] (or pivot)
```

```
arr[] = {10, 30, 40, 50, 70, 90, 80} // 80 and 70 Swapped
```

```
Now 70 is at its correct place. All elements smaller than
70 are before it and all elements greater than 70 are after
it.
```
